

## Company Overview

TelEvolution's vision is to utilize the flexibility, control and power of the Internet within the VoIP framework: making phone calls free like email. TelEvolution has developed a new technology that transparently joins Voice over Internet Protocol (VoIP) with a customer's existing Public Switched Telephone Network (PSTN) service. PhoneGnome, the company's product offering, is the first version of TelEvolution's extensive technology which will be seen across a wide array of products going forward.

TelEvolution brings a unique perspective to Internet telephony – that voice is a product that the consumer can purchase, not a service that is continuously paid for. TelEvolution's goal is to give each consumer the capability to make free unlimited calls anywhere in the world in the same way they have always made phone calls.

Most telephone services strive to lock in consumers into contracts, specific plans, and features. TelEvolution strives to give consumers a choice. TelEvolution products give people unprecedented power and control over their communications experience. Consumers decide what features and services they want from any telephony service provider in the world.

TelEvolution brings VoIP to everyone by removing the current barriers that hamper consumer migration to VoIP with PhoneGnome™. Using a PhoneGnome means 911 emergency services and directory assistance are not disrupted. TiVo, home alarm systems, and DSS receivers are compatible with PhoneGnome and all TelEvolution offerings. Traditional telephone service is not interrupted when the power goes out or when the Internet is down. No service subscription, computer, or dedicated software is required.

TelEvolution utilizes the platform model on which business partners can provide a wide range of application services to PhoneGnome owners. The applications services give our partners the ability to provide advanced applications to PhoneGnome owners for inbound and outbound calls made on both existing POTS lines and through VoIP initiated or received calls.

PhoneGnome™ is available online for purchase by visiting the company's web site, <http://www.PhoneGnome.com>, partner website [www.Voxilla.com](http://www.Voxilla.com), and at retail locations across the United States.
